

HomeKit4Niagara

Talk to Niagara 4 using Siri with our Homekit4Niagara driver!

Homekit4Niagara installs into a Niagara 4 JACE or Supervisor as a Driver. HomeKit points may then be configured and linked to real control points within the station. Currently HomeKit4Niagara supports Light/Switch on/off and Temperature sensor readouts.

Once installed, the user may generate a pairing code which must then be scanned/entered into the Home App on the users Apple device. The Home app will then show the station and the configured points below it. You may now switch these points in the app or interact with them via Siri.

What is Apple HomeKit?

Apple HomeKit is a system that allows control of smart home devices such as thermostat's, lights, locks and switches through an app on your Apple iOS device as well as with voice commands using Siri, the popular Apple digital assistant present on everyone's iPhone's, iPads and Mac's.

How does HomeKit work?

REQUIREMENTS

Please make sure the following is in place before deploying the HomeKit driver:

- JACE-8000 / Supervisor with Niagara 4.3 - 4.6.
- Outbound internet connection for JACE-8000 / Supervisor.
- Clock properly configured on the JACE-8000 / Supervisor.
- iPhone/iPad on the same network as the JACE-8000 / Supervisor.
