Installing The Software

Software Module Installation

Before the ossGraphicsLibrary software can be used, the software module must be installed on the user's PC and the target host.
The following files supplied by One Sightsolutions must be installed on the host using the platform software manager:

- ossEasyHistoryExport-wb.jar

The software files must also be installed in the appropriate modules directory of any PC on which you intend to access the ossGraphicsLibrary software.

Software Licensing

The host running the ossGraphicsLibrary must be licensed by One Sightsolutions before it will operate correctly.
The following information is required to generate the ossGraphicsLibrary license:

- Niagara host identifier (e.g. Qnx-TITAN-0000-XXXX-XXXX).

- Niagara host serial number (if the host is not a supervisor).

Please send this information to One Sightsolutions: sales@onesight.solutions
It is recommended that the license is installed on the Niagara host using the platform license manager import capability to download the license directly from the Niagara license server over the internet.
If it is not possible for the host to download the license from the internet then One Sightsolutions can supply the license files necessary which can be installed manually.
Ensure that the One Sight Solutions certificate is also installed, so the Niagara platform license manager should show both of the following files:

- OneSightSolutions.license

- OneSightSolutions.certificate

The host should reboot during the license installation process.
